ABSTRACT

This software has developed for A prerequisite to the development of an efficient animal health, food safety and traceability management system in the animal food production chain is the implementation of an integrated veterinary informational management system (VIMS) capable for the capture, storage, analysis and retrieval of data and providing the opportunity for the cumulative gathering of the knowledge and capability for its competent interpretation. Such a system will enable collecting appropriate data, including quality management. A system for management of a regarding animal details. To make easier the administration of admin, customer, consultation (animal care). Providing the following basic features: animals, owners and customer registration, services and animal details maintenance also management of the consults.

I. INTRODUCTION

Animal Medical Store Management System is an application project developed for medical shops. This system is a field concerned with purchasing and selling medicines, maintaining their inventory, generating sales invoices and generating reminders. It requires more time and effort when all procedures are performed manually. The goal of the system is to create a tool for managing the workflow of a veterinarian. There was a need for a light weight application that would keep track of patients, appointments, procedures and medication. All these vets need a web application to manage their work, clients, patients, medication, timetables, receipts.

Thus, in order to reduce time consumption and human effort the Animal Medical Store Management System application can be applied in medicals where manual procedure exists. The purpose of this project is to reduce time consumption and human effort. This application provides user friendly interface as well.

Pharma the complete medical shop management software is so designed as to ease the work load of medical shop professionals. The main feature includes invoicing, inventory and stock control, accounting, client and vendor management.

This software helps you to track all the profits, loss, profitable clients and products of medical shop moreover it's a medical shop accounting software. Flexible and adaptive software suited to medical shops or stores or pharmacies of any size.

II. LITERATURE SURVEY

Literature Survey for problem identification and specification

[1] "Animal medical store management Systems-A Review" Hitesh Walia[1], Neelu Jain[2], maintain health of animals and management has become important in today's world as manage health and achievement go hand in hand. Health management is one of the work ethics valued by animal. Most of the medical filed and government organizations in developing countries still use paper based management method for maintaining animal related health records. There is a need to replace these traditional methods of store record. The unique specific reminder makes it ideal for use in animal medical store management systems. Besides being secure, animal medical store management system will also be environment friendly. It can also be used in applications such as identity management and access control. This review incorporates the problems of store management systems presently in use, working of a typical animal store management system, study of different systems, their advantages, disadvantages and comparison based upon important parameters.

[2]" Animal medical store management Systems" Olanike Christianah Akinduyite, Adebayo O Adetunmbi, This paper presents the animal medical store management system using updated technology in a medical environment. It consists of two processes name and id. The Animal medical store management Systems was implemented with java on the. NET framework and Microsoft's Structured Query Language (SQL) Server 2005 as the backend.

Project Objectives

- Computerized patient's information and treatment review.
- Give clinic staff easy way in doing information maintenance and updates.
- Upgrade performance.
- Easy access to system options

III. PROBLEM STATEMENT

It is necessary to give medicine to the animals at the right time so that the do not get any disease or if they get any disease but some farmers forget to give medicine to the at the right time.so as a solution to this, we have developed this application. And help to the medical owner to Menten his customer details and store the all information to regarding his animal.

Veterinary clinic is a web application that helps to store and manage information and procedures that vets have to deal with every day and keep track of the patients. The pages are made by HTML, the database is handled by MySQL, the application logic is controlled by PHP.

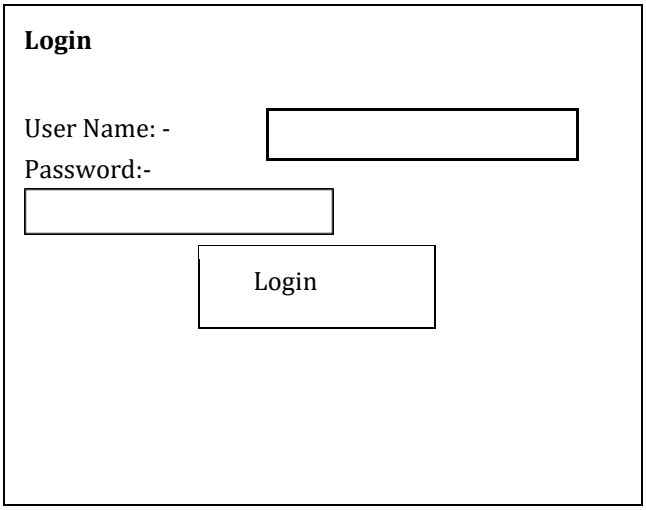
IV. MODULE DESCRIPTION

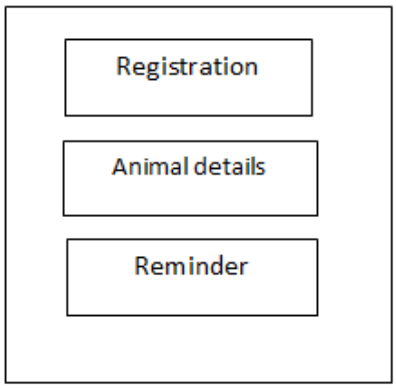
1. User module:

This is user module where can user would be able to login. After login the User would be able to Registration of his animal. This module is created for animals health purpose and use of user and admin.



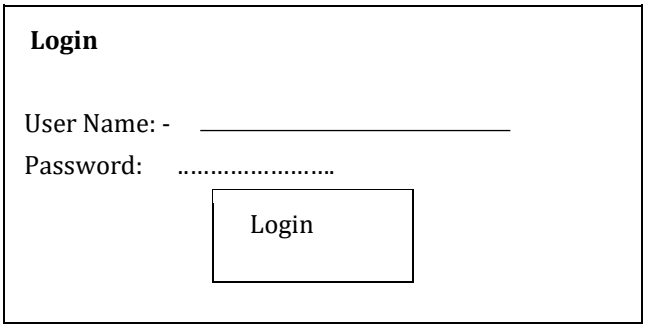
2. Homepage module of user:

This is our homepage module in this module the user can registration and view more information. There are four buttons in the module which are home, registration, animal details, reminder.



3. Admin Module

This is Admin module where admin can would be able to login. After login the admin would be able to add new customer. This module is created for saving time and security purpose and use of user and admin.



4. Homepage module:

This is our homepage module in this module the admin can add customer and store information. There are four buttons in the module which are Add customer, Delete customer, View details.

V. WORKING

A animal medical store management system works by using a customer to the registration his animal with unique user id and password. The system typically consists of two main components.

- Admin Login: The admin can login this app The Authentication of admin to add customer and delete customer. The admin can also view all information about customer and his register animals.
- User Login: The user or customer can login this app the user registration the his animal and set the reminder. User can registration of his animal with unique id.

Here is step-by-step working of a animal medical store management system.

The user can login:

1. Registration: in the registration process, the registration of animals using unique id, name and regarding basic details.
2. View animal details: in the view animal details process, the user can view his register animals detail.
3. Reminder: in the reminder process, set the reminder to the provides of notification of customer to set reminder thus day and time for specific given reason.

The admin can login:

1. Add customer: in the add customer process, the admin can add new customer. Only admin can add new users.
2. Delete customer: in the delete customer process, the admin Can delete any customer. Only admin can delete any customer.
3. View details: in the view details process, the admin can view details of all information about his registration customer and his register animals.

Overall, animal medical store management system provide essay, simple and accurate way of improving the animal's health care, which help of the former and medical stores to improve his production.

VI. CONCLUSION

Animal Store Management System is application that provides useful information to the users. Users can be animal owner. Customer can fill up registration form through the application. Not only that, the application also provides specific reminder alarm. This project was expected to be one of the most useful systems for animal medical store because customer can avoid wasting their time, energy and money. With the existence of this application, it will act as a medium of interaction between the customer and the store management system. Customer administrators can update any recent activities related to pets on the application front page.
